

Liquid Fulvic

5% FULVIC ACID

Earthcare Liquid Fulvic contains fulvic acid and potassium fulvates which are suitable for use directly as a foliar fertiliser or with other water-soluble NPK fertilisers as a chelating agent. Earthcare Liquid Fulvic chelates most plant nutrients and makes them readily available for uptake by plants through foliar applications in overhead irrigations or hydroponic systems. Research has shown that the fulvic acids in Earthcare Liquid Fulvic boost the response time by plants to fertilizer applications. This is very important in correcting any nutrient deficiencies in plants during growth, especially where deficiencies in nitrogen or trace elements are concerned. The fulvic acids in Earthcare Liquid Fulvic are extracted from the humic substances of naturally derived plant organic matter.

Benefits of Earthcare Liquid Organic Fulvic

- improve the uptake of nutrients by plants in foliar applications
- chelate with plant nutrients to reduce their immobilisation in the soil
- promote quicker seed germination and faster root and shoot growth
- provide a valuable source of carbon for soil micro-organisms
- improve the efficacy of many non-selective herbicides
- offer drought protection due to improved water storage

Application :

Earthcare Liquid Fulvic can be applied to plants during the growing season to quickly correct major and micro-nutrient deficiency. Earthcare Liquid Fulvic is compatible with a wide range of liquid fertilisers. Earthcare Liquid Fulvic is most effective when used with foliar fertilisers.

Application Rate:

Apply 3 to 5 litres Earthcare Liquid Fulvic per hectare.

Mix Earthcare Liquid Fulvic with liquid fertilisers at 0.5% concentration

(1 part Earthcare Liquid Fulvic to 200 parts water or nutrient solution) before application.

Typical Analysis: Soluble Fulvate 5% (min) Nitrogen (N) 50 mg/litre
Potassium (K) 5000 mg/litre Sulphur (S) 28 mg/litre
Calcium (Ca) 26 mg/litre pH 4
